Outline

- 1. Topic Review
- 2. Flow chart
- 3. Methodology
- 4. Result

Motivation & Goal

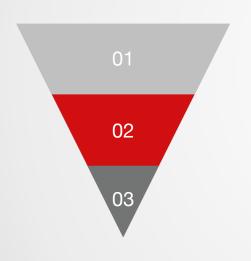

- Inspired by Mark Minervini: Winner of 2021 U.S. Investing Championship with 338.42% return
- □ VCP mastery: Proven breakout pattern identification
- □ Strategy: Combines technical strength & fundamentals
- □ Goal: Apply VCP in Taiwan market

Catch a Volatility Contraction Pattern (VCP) Breakout in Taiwan Market

Objective:

Capture stocks with strong upward momentum in a short period.

Filter 1: Stage 2

Filter 2: VCP

Filter3: Strong fundamental support

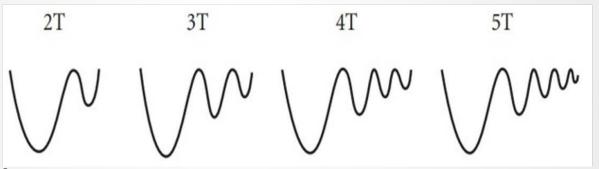

VCP

The development of the VCP pattern includes:

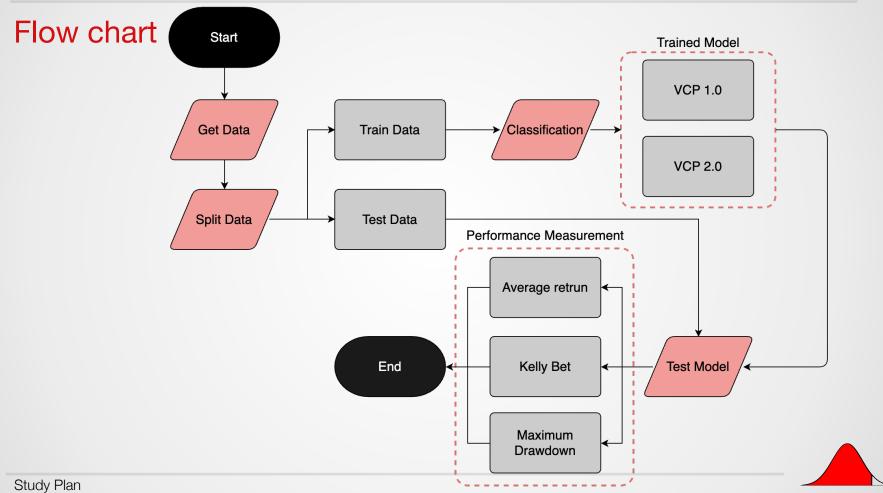

- □ Decreased trading volume
- □ Price range contraction

Examples

Source: Minervini, M. (2013). Trade Like a Stock Market Wizard: How to Achieve Super Performance in Stocks in Any Market. McGraw-Hill Education.

Methodology 7

Flow chart of Algorithm

START

Historical trading volume data for all stocks.

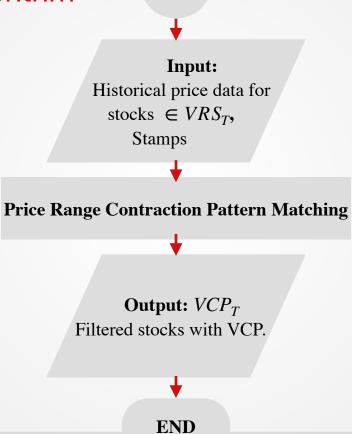

Volume Reduction Screening

Output: VRS_T Filtered stocks with volume reduction.

Methodology 8

Flow chart of Algorithm

VCP Trading Strategy

Step1 :Volume Reduction Screening

- 1. For each stock j in the market at time T:
 - Calculate volume moving averages:

$$V_j^{10ma} = \frac{1}{10} \sum_{t=T-9}^{T} V_{j,t}$$

$$V_j^{60ma} = \frac{1}{60} \sum_{t=T-59}^{T} V_{j,t}$$

2. Let the set of stocks with volume reduction be denoted by:

$$VRS_T = \left\{ j \mid V_j^{10ma} < 0.5 V_j^{60ma} \right\}$$

VCP Trading Strategy

Step2: Price Range Contraction Pattern Matching

For each stock $j \in VRS_T$ at time T:

- Get historical prices $P_{t,j}$ for past t days
- Normalize prices and time to $\widetilde{P_{t,j}}$ using min-max scaling
- Calculate similarity score

$$\rho_j = \max\left(\cos\left(\widetilde{P_{t,j}}, stamp_k\right)\right), \forall k = 2, 3, ..., 10$$

Methodology 11

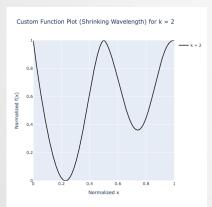

Appendix: Examples for Rescaling

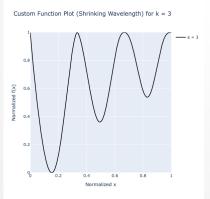

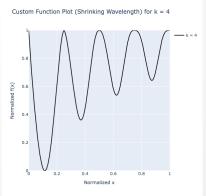

Appendix: $Stamp_k$, $\forall k = 2,3,...,10$

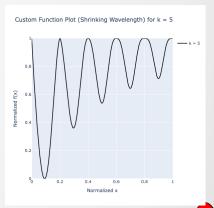

$$f(x) = -\frac{\left(\cos^2(3\pi x)\right)^x}{x}, \ 0.5 < x < 0.5 + k \cdot \frac{1}{3}$$

After normalized the function to f(x) using min-max scaling:

VCP Trading Strategy

Step3 :Cross-sectional Ranking

- Sort all ρ_i in descending order
- Select top 50 stocks with highest similarity score:

$$VCP_T = \left\{ j \mid rank\left(\rho_j\right) \le 50 \right\}$$

Appendix: Cross-sectional Ranking

$$\rho_j = \max\left(\cos\left(\widetilde{P_{t,j}}, stamp_k\right)\right), \forall k = 2, 3, ..., 10$$

	$ ho_j$
stock ₁	0.99
stock ₂	0.96
$stock_n$	0.063

VCP Trading Strategy

Step4 Daily Update

- Calculate new VCP_{T+1} each day
- Track set changes:
 - Entry: $N = VCP_{T+1} \setminus VCP_T$ (new stocks)
 - . Exit: $E = \left\{ j \, | \, r_j \geq (1+\alpha) \vee r_j \leq (1-\beta) \right\}$ (removed stocks)
 - Hold: $H = (VCP_{T+1} \cup VCP_T) \backslash E$ (maintained stocks)

Result 16

Result

	VCP 1.0	VCP 2.0
Number of Trades	4,053	2,983
Win Rate	50.20%	49.59%
Average Win Return(bp)	550.03	491.36
Average Loss Return(bp)	-423.93	-393.44
Average Return per Trade(bp)	65.67	45.59
Win/Loss Ratio	1.3	1.25
Kelly Criterion	11.88%	9.26%
Holding period(day)	6	6
MDD	-21.40%	-19.60%

Catch a Volatility Contraction Pattern (VCP) Breakout in Taiwan Market

Objective:

Capture stocks with strong upward momentum in a short period.
